**STRONG BRANDS:
PLAKAL · GELTACK · GELBOND · MATCHTACK**

GELTACK – WITH THE EXPERIENCE OF MILLENNIA

What has lasted thousands of years, simply must be good. What has had thousands of years to evolve, simply must be better. This makes the protein adhesive GELTACK the most modern adhesive technology based on historical knowledge. After all, you don't have to reinvent the wheel. Only to optimise it.

PURE NATURE – BEFORE AND AFTER RECYCLING

GELTACK is based on renewable "raw materials". What is left is water and a water-soluble, completely biodegradable organic substance: gelatin, a purely natural product. This macromolecular proteinaceous substance is also used in modified form on the foodstuffs and cosmetics sectors. Specific cleaning steps, conditioning, drying, and mixing all give rise to the consistent quality of the protein adhesive GELTACK.

THE BRAND WITH THE TOP TACK

- easy to process
- versatile in use
- approved eco-friendliness
- zero health risks also during processing
- good dissolving properties, no clumping
- high adhesive power after setting
- price-performance ratio that holds its own
- in a dry environment virtually unlimited shelf life without loss of quality
- approved for food packaging

GELTACK – USED ALL OVER THE WORLD FOR STRONG BONDS

GELTACK made by Häcker is used all over the world thanks to its versatility, superior quality, good processability, and eco-friendliness – as an adhesive, binder, impregnate, or coating.

ABRASIVE PAPER – ROUGH METHOD, SMOOTH RESULTS

GELTACK embeds the abrasive particles elastically on the substrate. Wherever abrasive paper has to be applied to sensitive surfaces like leather, etc., GELTACK is superior to synthetic resins.

ADHESIVE TAPE – GELTACK BONDS

Cartons must be glued quickly and easily – moisten, sticks. This requires rationalisation. But also reliability, i.e. a must for packaging of e.g. pharmaceutical products.

SPECIAL PAPER – THE ART OF MAKING ART POSSIBLE

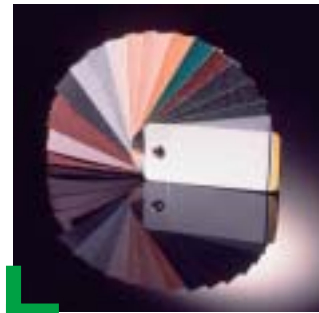

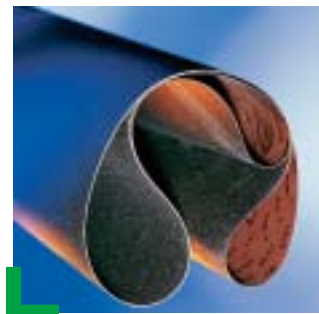

GELTACK impregnates the surface of aquarelle paper, making it more absorbent for watercolours and therefore the work more brilliant.

MATCHES – FIRE AND FLAME WITH MATCHTACK

Wherever things start getting hot, MATCHTACK is in great demand. It holds together the components of the match's head and froths these on ignition. All over the world 190,000 users rely on the function of a match every second.

PAPER, FLEECE, AND PACKAGING – GELBOND CAN HANDLE IT

This protein adhesive is ideal for bonding the most diverse materials, from paper to wood, from glass wool to polystyrene foam. And at the same time it is resistant to organic solvents and temperatures over 150 °C and poses zero risks to health and the environment.

Fritz Häcker ...

Innovative by tradition

... the modern-day traditional company with over 100 years of corporate and over 4000 years of technological history.

Personally there for you

... the medium-sized, unaffiliated company with the short routes and fast decisions. ■

Naturally ecological

... the company operating on a sustainable basis, refining exclusively renewable, natural raw materials based on protein. ■

Far ahead

... the company close to the market, providing innovative answers to many issues on ecological bonding. ■

Your advantage

... service and customer benefits are what we demand from ourselves. ■

Operating all over the world

... one of the world's leading manufacturers of protein adhesives – and thanks to our tight sales network close to you too. ■
